

## **Scientific Logical Test Introduction**

The scientific logical test aims at testing students' scientific logics which involve:

the ability to extract useful messages from given data/information

the ability to deduce a reasonable conclusion from given data/information

the ability to predict an available result from given data/information

the ability to solve problems with scientific logics/methods

This test is not knowledge based. That means all questions are not based on any school teaching contents. Students with different backgrounds are all able to answer these questions as we Ulink are not only looking at what students have learned before but also the capabilities of those students to learn new knowledge in the future.
